

Create energy savings...

by transforming your standard light switch!

The easiest way to save energy is to stop wasting it by installing a PIR motion sensor.

Our Schneider Electric compact 100MPIR fits into where a traditional light switch resides and, due to its modular design, can be combined into any 600 series or 800 Series wall plate with a conventional light switch.

Perfect for – corridors, bathrooms, storage rooms, garages, pantries, closets and entranceways.

All savings are estimates only and are based on an electricity per kilowatt hour. Actual energy and cost savings will depend on individual usage patterns and local conditions.

Lighting accounts for 20% to 30% of electricity consumption at home.

Try on something new with Schneider Electric's extensive stylish switchgear ranges

These great styles and finishes fit to standard size existing wall boxes, so they can be part of your next renovation.
